**~Biology Education and Research
in a Changing Planet~**

Sub-themes:

- The Endangered Planet. How can 'Biology Education' help?**
- Biology education in an X,Y,Z world.**
- Assessment beyond examinations**
- Creating the next generation of biology teachers.**
- Seeing the living world in a new light ~ Technology in
Biology Education**

Nature's ecosystems as we know it are changing. The biological and geological future of the Earth can be extrapolated based upon influences such as the chemistry at the Earth's surface, the rate of cooling of the planet's interior, the gravitational interactions with other objects in the Solar System, and a steady increase in the Sun's luminosity. What does this mean for biology education and for biology educators in particular? How can we prepare to teach a new biology? What is the new biology? This conference will address this.
